Silver Medal Awards

Petunia ®
3312 America Alldouble
Distinctly different from all other double Petunias,—100% true for doublingness. This is the first of the “Alldouble Petunias” originated in this country to be offered to American gardeners. The plants branch freely but retain a desirable compactness. They grow about a foot tall and make a showy circular cushion 18 in. in diameter. The flowers measure up to 2 3/4 in. in diameter and are an appealing sparkling rose-pink color. The small mid-green foliage has little stickiness. Pkt. 50c; large pkt. $2.25.

Marigold ®
Dwarf Double French
2944 Sunkist
The plants of this Silver Medal winner greatly resemble those of Butter Ball which was introduced last year. They are of compact, dwarf growth and therefore highly desirable for dwarf beds and borders; yet the individual flower stems are long enough to permit artistic arrangement of the flowers in vases of moderate size. Sunkist belongs to the Harmony type of Marigolds and has attractive double rich orange blooms. Pkt. 25c; large pkt. 60c.

Bronze Medal Award

3308 Petunia, Dwarf Compact Igloo ®
A delightful new Petunia making dense bushes of neat, compact growth covered continuously with a grand display of flowers from early summer until hard frost in the fall. The individual blooms are only 1 1/2 inches in diameter but they are produced so freely as to cover the plants completely. They are a pleasing creamy white with a more pronounced yellow tint in the throat. Pkt. 25c; large pkt. 75c.

Honorable Mention

Single bedding Petunia ®
3332 English Violet
This belongs to the hybrid nana class and adds a delightful new color to this valuable group—a bright purple-violet of velvety richness, set against a dense mass of bright green foliage which sets off the flowers to good advantage. Pkt. 25c; large pkt. 75c.

Cosmos, Giant Sensation ®
2046 Dazzler
Like the other Sensation Cosmos this new variety exhibits a splendid combination of earliness, vigor, and size of flowers. The well-formed, broad-petaled blooms are an appealing deep amaranth crimson. They measure 3 to 4 inches across. Pkt. 25c; large pkt. 50c; 1/4 oz. 75c.

Aster ®
1307 Victory Giant Mixed
Here is a new class of Asters which as far as the flowers are concerned resemble the California Giants but they start blooming well in advance of that popular type. Includes a splendid range of desirable colors. Pkt. 25c; large pkt. 75c.

Aster ®
1302 Extra-Early Navy Blue
Elegant large flowers in form not unlike those of the Giant Crego Aster but blooming considerably earlier. The individual flowers measure about 4 in. in diameter and are a deep velvety purple with the blooms well displayed on plants 20 in. tall. Pkt. 25c; large pkt. 75c.

It’s Easy To Plan Your Garden By Following The Symbols Used Throughout This Book

The symbols shown below with explanations will help you much to plan your garden. They stand out from the text and therefore make it easy to pick out the kinds suited to specific conditions.

First of all most gardeners want to know if a plant is an annual, biennial, or perennial. In the case of perennials we have further identified them as half hardy, hardy, and tender, so that you may know about any winter protection required.

Climbing plants are wanted by many gardeners because they take so little space and add incomparable beauty to garden houses, trellises, fences, posts, etc.

With rock gardens still of major interest to thousands of gardeners the little triangle (Δ) will quickly direct the eye to those suited to this purpose.

Very important to success is the knowledge as to the amount of light required by certain plants in order to make the best display. There are comparatively few which will grow well in dense shade, but those suited to semi-shade will serve in most instances. Of course practically all those which do well in semi-shade also give a fine display in an exposure with full sun.

①=Annual. Annual flowers complete their life cycle within one growing season. They must be sown every year.

②=Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

[H]=Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[H]=Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[T]=Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are shwy bedding plants for a summer and fall display.

§=Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

Δ=Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

Ο=Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

Φ=Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

* Seeds marked with * often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

All America Selections of 1941

PLANT A

Patriotism, as well as common sense, demands that every one with a suitable piece of ground plant a Victory Vegetable Garden this year. No matter how small the plot the many thousands of them spread all over the country will sum up to an important contribution to the nation’s war effort. Devote as much space to it as you can provide and take care of.

**Home-Grown Vegetables have Better Flavor and More Vitamins**

Home-grown vegetables invariably are much superior to most market produce. They are more tender and tasty because of their freshness. There is not the deterioration as is so often the case with market produce. Just remember how delectable Sweet Corn is when it reaches the table within an hour after having been pulled from the stalks. This also is true of Peas and Beans. Carrots, Beets, and other root crops, too, have a sweetness and flavor unknown to most people accustomed to eating produce which may be weeks old by the time it reaches the table.

Just think of stepping into the garden and picking what you need for the next meal—lots of it and of real goodness. It saves refrigerator space (and that means electricity) and the expense of frequent trips to the store. Gas, rubber, valuable time, and manpower are conserved.

**VEGETABLE PLANTING CALENDAR**

The dates given apply to the vicinity of Philadelphia and sections with similar growing conditions. They are based on the ground becoming workable some time in March with expectancy of frost being passed by mid-April. Light fall frost in early October and heavy frost in late October regulate the end of the growing season. For every 100 miles north sow one week earlier after June 30. Reverse the procedure for every 100 miles southward.

Garden Planning Insures Success

The planned garden insures a maximum of fresh vegetables from a given area. Decide first which vegetables you wish to grow and send your order just as soon as possible because some seeds are quite scarce this year. While you await their arrival make a planting plan. Arrange according to the planting dates given on the opposite page. The beginner will do well to restrict his activities to outdoor gardening as the simplest way to success. Plants of Peppers and Egg plants may be secured locally at the right time for setting out in the particular location. Tomato and Cabbage plants also are available almost everywhere though it is a simple matter to grow these. Sow in a box or pan placed in a sunny window. From 6 to 8 weeks are required to secure plants large enough for setting in the garden.

Arranging the Garden

In arranging the garden allow for sufficient space between the rows so that the plants will not be too crowded. From 12 to 15 inches of space suffice to separate the rows of Beets, Carrots, Lettuce, Turnips and Rutabaga. Spinach, Onions, and Radish can stand a foot apart. Swiss Chard, Bush Beans, Parsnip, Salisify, and dwarf Peas require not less than 2 feet between the rows. Lima Beans, Sweet Corn, tall Peas, Squash, Tomatoes, Muskmelon, Cucumber, and New Zealand Spinach must have not less than four feet separating the rows.

Succession Sowing

By planning for a succession of crops many vegetables may be had until late fall. Thus Beets, Carrots, Lettuce, Bush Beans, and Sweet Corn may be sown at two week intervals to produce a continuous supply of delectable young produce full of flavor and vitamins. Follow the planting calendar to determine the correctness of the sowing times. Consume all produce before it has reached its maximum size as it is then that it is most palatable and wholesome.

Just as soon as a row has been harvested replant with another crop after loosening the soil with the spade and crumbling it well. Follow the leaf crops such as Lettuce with either a root crop or one belonging to the edible seed group which includes Beans, Peas, and Sweet Corn. The root crops are followed by a leaf crop or the edible seed group. Lastly the edible seeds are followed with a kind grown for its leaves or a root vegetable. This rotation is quite important to secure maximum yields from the garden.

Canning and Storing

If space permits, plan to grow enough vegetables for canning a good winter supply. Also grow enough Beets, Carrots, Turnips, and Rutabaga for winter storage in a cool cellar or an outdoor pit. They will keep in good condition well into the late winter if stored cool but frostproof and slightly damp.

Soil Preparation

Spade the soil deeply just as early in the spring as it has lost its stickiness. Crumble well while turning each spadeful. Decayed manure is best spaded under but dried manures and fertilizer are best added after spading but before the surface is raked level and smooth. Use a string or line to secure straight rows. Open the furrows with a stick for seeds which are covered from \( \frac{1}{2} \) to \( \frac{3}{4} \) inch deep. The rows for larger ones such as Beans, Peas, and Sweet Corn are made with the edge of the hoe. Always sow thinly.

Planting Depth

Correct planting depth is highly important and the general rule to cover seeds three to four times as deep as their smallest diameter applies as well to vegetables as to flowers. Use the rake to draw the soil over the seed and firm by walking over the row or pressing down with the end of the rake. Firm planting is very important with practically all kinds of seed. If the weather is very dry apply a fine, continuous spray of water until the soil is well moistened to a depth of several inches. The seeds of Beets, Carrots, and Parsley may be soaked previous to planting for two hours in warm water. Drain and wash thoroughly in cool water. Drain again and mix with dry sand to facilitate sowing.

Thinning

Thin the plants when about an inch high if they come up too thickly. Thin a second and third time or until they stand far enough apart in the row so that they will not interfere with one another. Crowded plants cannot develop properly. For detailed directions about growing the various crops refer to the information given in the pages which follow and to the seed packets.

Cultivation

Cultivation plays an important part because it encourages a vigorous growth. Keep the soil surface well stirred during the growing season. However, never cultivate while the soil is wet as otherwise its good physical condition will be impaired.

VEGETABLE SEEDS

For over one hundred years Dreer’s Vegetable Seeds have been the standard for both purity and vitality among the best gardeners in this country. They are grown with the utmost care from superior stock seed, gathered from the choicest specimens, and therefore represent the best that modern practice and modern science can produce. The list of varieties we offer contains both standard sorts and the best of the new ones. The cultural directions given in this book are for growing vegetables in the latitude of Philadelphia and allowance should be made for other sections. The varieties marked with a star (*) have received awards in the All America Selections of vegetables. The maturity dates given must necessarily be average because soil and weather conditions influence the growth of the crops.

Bush Lima Beans

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Being good feeders, they should be sown on well-enriched land, with the rows 2½ feet apart, placing the beans six inches apart in the row, eye down. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. One pound will plant 50 feet of row.

107 Fordhook Bush Lima
75 days. This variety is well known wherever Lima Beans are grown as it combines productiveness with choice quality. The plants make a vigorous, upright growth so that the pods are held well above the soil surface. This keeps them clean and avoids rust and rot even during wet seasons. The pods are borne in clusters which accounts for the productiveness of this splendid variety. Each pod is about 5 inches in length and contains 4 or 5 very thick, light green, oval beans which have a distinctive rich nut-like flavor quite unlike any other variety. Pkt. 10c; ½ lb. 30c; lb. 50c; 2 lbs. 90c; 5 lbs. $2.00, prepaid.

111 Dreer's Wonder Bush Lima

Pkt. 10c; ½ lb. 30c; lb. 50c; 2 lbs. 90c; 5 lbs. $2.10, prepaid.

All Vegetable Seeds are sent PREPAID except where stated otherwise.

Pole Lima Beans—For Extra-Heavy Crops

Culture—Pole Limas are even less hardy than the Bush type and should not be planted until toward the end of May or when all danger of frost is past. Set the poles about 3 feet apart each way and plant 6 to 8 beans, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is good practice to use a showy mix of rich, light, well-rotted compost to each hill. One pound of seed will plant 75 to 100 hills.

One ounce will plant fifty hills; two pounds will plant one acre. Dreer’s Reliable VEGETABLE SEEDS

Onion Seed

One ounce of Onion seed for 100 feet of drill, 5 to 6 pounds for an acre.

Culture—Seeds may be sown early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Pull when tops begin to die down, cure, and use, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and the Southport Globes, under glass in February or March and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

The Best Red Onions

The red-skinned Onions are by far the best winter keepers lasting well into the spring, far beyond the time that any of the white or yellow varieties could be kept in good condition. They mature rather late, have solid flesh, and their flavor is stronger than any of the others.

580 Large Red Wethersfield. 110 days. A well-known variety with very large thick flat onions having a bright purplish red skin. Solid flesh, shaded pink near the skin. Pkt. 10c; ½ oz. 45c; oz. 80c; 2 oz. $1.50.

582 Southport Red Globe. 120 days. The Southport Globe Onions are all very popular and this splendid red-skinned variety is no exception. The onions are perfectly round and have an attractive red skin and white flesh. Pkt. 10c; ½ oz. 45c; oz. 80c; 2 oz. $1.50.

The Leading White Sorts

The white-skinned onions are much milder in flavor than yellow or red ones but they do not keep so well.

584 Southport White Globe. 120 days. A well-known standard sort of medium size, perfect globe shape, with pure white skin. White, fine-grained flesh of fairly strong flavor. Pkt. 10c; ½ oz. 45c; oz. 80c; 2 oz. $1.50.

588 White Bunching. This variety does not form bulbs and it is grown exclusively for green onions or scallions. Sow the seed thickly in rows and earthen up gradually to blanch the stalks as far as possible. Pkt. 10c; ½ oz. 45c; oz. 80c; 2 oz. $1.50.

590 White Portugal or Silver Skin. 100 days. Attractive large, flat, pure white onions. A good keeper, also valuable for pickling and bunching. Fine-grained flesh of mild and pleasant flavor. Pkt. 10c; ½ oz. 45c; oz. 85c; 2 oz. $1.60.

594 White Sweet Spanish

110 days. By far the largest of the Globe-shaped white varieties. It resembles in form and size the pale yellow Valencia except that the color of the skin is a pure transparent white. The flesh is firm yet tender and it has an exceptionally mild and sweet flavor. Under favorable conditions individual onions of astonishing large size can easily be grown. Even under adverse conditions they reach an exceptional size. Yet they are always of sweet mild flavor. Pkt. 10c; ½ oz. 45c; oz. 85c; 2 oz. $1.85.

**Vining Winter Squash**

The Table Queen varieties are excellent for summer use as well as for winter storage. Winter Squash must remain on the vine until fully matured. Gather them before frost, leaving part of the stem attached to the fruit. Handle carefully; avoid bruising. Keep in a moderately warm, dry place during the winter.

858 Boston Marrow. 100 days. Similar in size and shape to Hubbard, 15 in. long and 12 in. in diameter. Has hard, rough, dull orange skin and thick, golden orange, fine grained, sweet flesh. The favorite for “pumpkin” pie. Pkt. 10c; oz. 20c; ¼ lb. 65c; lb. $2.00.

Cut open, remove the center core and season the flesh that appears as tightly wound spaghetti-like threads or strings, with salt and butter. Pkt. 10c; oz. 25c; ¼ lb. 70c; lb. $2.25.
**Tomato**

Wholesome and delicious whether used raw, cooked, or canned.

Culture—For the first crop sow seeds of the earliest sorts under glass or in the house above the middle of February. When they are 4 inches tall transplant them into flats or a spent hotbed to stand 4 inches apart each way. Give plenty of air on sunny days to harden properly. For the main crop, sow seeds of the second-early and main crop varieties in a hotbed or warm cold-frame by April 1st. Plant outdoors, 3 feet apart each way, about the end of May. **One ounce of seed will produce about 2500 plants. The maturity dates given for Tomatoes represent days from setting the plants outdoors.**

**The Earliest Sorts**

914 Ideal Early 70 days. A new extra-early variety ready for the table a day or two later than the earliest sorts. However, it greatly surpasses these in producing large, smooth, deep globe shaped fruits which are very solid. Of rich scarlet color, free from cracks, and remaining in good firm condition long after being picked. Pkt. 15c; ½ oz. 40c; oz. 70c.

894 Bonny Best. 73 days. An early variety, popular everywhere. The scarlet fruits are almost round, and are produced in abundance. This is also a good forcing Tomato. Pkt. 10c; ½ oz. 25c; oz. 40c; ½ lb. $1.35.

896 Break O'Day. 70 days. A splendid sort aptly called "The Early Marglobe" as it matures as much as 10 days ahead of that variety. The fruits are similar, being round, smooth, solid, and of a fine scarlet color. Highly resistant to disease. Pkt. 10c; ½ oz. 30c; oz. 50c; ½ lb. $1.75.

938 Penn State Earliana. 64 days. A standard extra-early with bright red fruits. Pkt. 10c; ½ oz. 30c; oz. 50c; ½ lb. $1.95.

940 Pritchard or Scarlet Topper ★75 days. A fine early Tomato with large, smooth, globular fruits ripening to a clear scarlet right up to the stem end. The flesh is deep red and the fruit has few seeds and no core. Like all early tomatoes it amply repays liberal fertilizing to secure the largest yields. Pkt. 10c; ½ oz. 25c; oz. 45c; ½ lb. $1.65.

**Second Early and Main Crop Tomatoes**

These mature later than the earliest varieties containing the crop until frost puts an end to their bearing. While all we list are good, we recommend particularly Marhio and Rutgers which are still comparatively new.

897 Crimson Cushion or Beefsteak. 88 days. One of the largest of the rich crimson Tomatoes, very solid and smooth. Pkt. 10c; ½ oz. 30c; oz. 50c; ½ lb. $1.95.

911 Golden Ponderosa. 86 days. Very large fruits of splendid quality. Solid, rich golden yellow flesh of very mild flavor. Pkt. 15c; ½ oz. 70c; oz. $1.25.

926 Marhio. 75 days. A choice deep pink selection from Marglobe embodying its wilt-resistant qualities. Round fruits with thin skin and pink flesh. An enormous cropper of attractive appearance. Pkt. 10c; ½ oz. 25c; oz. 40c; ½ lb. $1.50.

923 Marglobe, Certified 75 days. This fine second-early produces large, smooth, meaty, globular, red fruits which ripen evenly and are free from cracks. An extremely heavy cropper, particularly valuable in districts troubled with rust and wilt as in many of the Southern States, because it is decidedly wilt-resistant. Pkt. 15c; ½ oz. 35c; oz. 60c; ¼ lb. $2.25.

927 Oxheart. 90 days. An attractive variety of distinct form, with deep heart-shaped fruits some of which are of immense size and weight. Solid, deep rose-red flesh with few seeds, and extremely mild and free from acid. A fine late-maturing home garden sort. Pkt. 15c; ½ oz. 55c; oz. 95c; ½ lb. $1.50.

930 Ponderosa. 85 days. The largest of all. A profitable and popular late sort for the home garden. Large purplish-pink fruits of fine flavor. Pkt. 15c; ½ oz. 40c; oz. 75c; ¼ lb. $2.50.

937 Rutgers Certified. 73 days. A consistently heavy cropper with uniform, globular, smooth, and very solid fruits averaging about 6 ounces each. Ripens very evenly from the inside out and is of a sparkling red color. Suitable for canning, market, and the home garden. Gives a delicious highly colored juice. Pkt. 15c; ½ oz. 55c; oz. 90c; ¼ lb. $2.25.

942 Selected Stone. 85 days. Probably the most widely grown Tomato in the country. Very dependable and will produce a large crop of solid deep red fruits. A splendid canner. Pkt. 10c; ½ oz. 25c; oz. 45c; ¼ lb. $1.65.

950 Stokesdale 70 days. A very important newer tomato of attractive bright scarlet color with fruits weighing 5½ to 6 ozs. each. They are smooth, globe-shaped, solid, and of splendid quality. A favorite with home gardeners, market growers, canners, and shippers. Pkt. 10c; ½ oz. 30c; oz. 50c; ½ lb. $1.85.

**Forcing Tomato**

928 Michigan State Forcing. 75 days. A new wilt-resistant variety developed by the Michigan State Agricultural College. Deep smooth globular scarlet fruits of choicest quality. Pkt. 25c; ½ oz. $1.30; oz. $2.00.

Lilium—Summer-Flowering Lilies

Lilies are among the most beautiful hardy garden plants. They are easy to grow and give a wonderful effect yet they take little space tucked away among perennials in the border where their towering spikes reign supreme. Take care to plant them just as early in the spring as possible and that means March or April in the vicinity of Philadelphia. Follow the planting depth as given under each variety.

**Fertilizers for Lawn and Garden**

*Customer pays transportation charges on fertilizers*

The War Production Board ordered in September of last year a nation-wide conservation of chemical fertilizers, prohibiting their use on golf-courses, cemeteries, lawns, roadsides, and non-commercial plantings of trees, shrubs and flowers. This situation affects all home gardeners, many of whom have become accustomed to using nothing but the highly-concentrated chemical fertilizers for their vegetable and flower garden. There is a possibility that approved grades of fertilizers will be made available later on for use on vegetables in the home garden.

Bovung is ideal for use on the lawn, while our experiments with it upon flowering plants has proved it superior to any other manure. Use 100 lbs. per 1000 sq. ft. 5 lbs. 35c; 10 lbs. 60c; 25 lbs. $1.00; 50 lbs. $1.65; 100 lbs. $3.00; 500 lbs. $14.00; 1000 lbs. $26.50; ton $48.00.

Cow Manure. Dried and shredded. A desirable natural plant food and soil builder. Use 100 lbs. per 1000 sq. ft. 10 lbs. 70c; 25 lbs. $1.20; 50 lbs. $2.00; 100 lbs. $3.50; 500 lbs. $17.00; 1000 lbs. $32.50; ton $62.00.

Cotton Seed Meal. An excellent organic fertilizer for ericaceous plants such as Laurel, Rhododendrons, etc. 20 lbs. for 1000 sq. ft. 5 lbs. 30c; 10 lbs. 90c; 25 lbs. $1.50; 50 lbs. $2.50; 100 lbs. $4.75.

The rate of application under each product is average. In the case of fertilizers they may be decreased or increased within certain limits depending upon conditions. Excessive applications of fertilizer not only are harmful but, in fact, cause damage. Michigan Peat and Peat Moss on the other hand may be used 4 to 5 inches deep for spading into the soil.

Hyper Humus. Humus is organic matter that has reverted to a soil-like condition. It will lighten heavy soils, while sandy soils are benefited through their added ability to retain moisture. Use at the rate of 2 to 4 lbs. per square foot. 25 lbs. 75c; 50 lbs. $1.25; 100 lbs. $4.00; 500 lbs. $9.50; 1000 lbs. $18.00; ton $35.00.

Lime, Hydrated. Use 50 lbs. per 1000 sq. ft. 10 lbs. 30c; 50 lbs. 85c; 100 lbs. $1.40; 500 lbs. $6.30; 1000 lbs. $12.00; ton $20.00.

Limestone. Pulverized. For making soils alkaline nothing is safer than limestone. 70 lbs. for 1000 sq. ft. 80 lbs. 85c; 480 lbs. $4.50; 960 lbs. $8.00; ton $15.00.

Murate of Potash. Use 6 lbs. for 1000 sq. ft. of surface. 5 lbs. 45c; 10 lbs. 75c; 25 lbs. $1.25; 100 lbs. $4.00.

Superphosphate (16%). Use 20 lbs. for 1000 sq. ft. 10 lbs. 60c; 25 lbs. $1.00; 50 lbs. $1.45; 100 lbs. $2.35.

Michigan Peat

Nature's finest soil builder containing approximately 97% organic matter—the highest found in any peat product. Outlasts humus in the soil. Retains six times its weight in moisture and prevents draining away of liquid plant food. Stimulates root growth, lightens soil, and aids drainage. One bushel covers about 20 sq. ft. of area, one inch deep. 1 bushel $1.00; 3 bushels $2.50; 10 bushels $7.50; 1000 lbs. $20.00; ton $39.00.

**Peatmoss, Horticultural**

An indispensable material for the improvement of all kinds of soil and potting soil mixtures. One bale will cover about 200 square feet 1-inch deep. For seed pans, mix equal parts of good soil, sand, and peatmoss. If used in the garden, always mix well with the soil 4 inches deep except when used as a mulch.

25 lbs. $1.50 not prepaid
50 lbs. $2.75
1 bale $5.50

**Silk, Agricultural.** Used upon Asparagus beds, chiefly for keeping down weeds at the rate of 20 lbs. per 1000 sq. ft. 100 lbs. $7.00; 500 lbs. $38.00.

**Dried Sheep Manure**

One of the most used animal manures in the growing of flowers and upon lawns. Use at the rate of 100 lbs. to 1000 sq. ft. 5 lbs. 40c; 10 lbs. 65c; 25 lbs. $1.20; 50 lbs. $2.00; 100 lbs. $3.65; 500 lbs. $17.00; 1000 lbs. $32.00; 1 ton $62.00.

**Tobacco Mulch, Coarse Ground.** Supplies organic potash and nitrogen. It adds humus to the soil and will increase the value of any chemical fertilizer when used in equal parts. Very desirable for mulching the Rose garden. 50 lbs. $1.85.

**Tobacco Stems, Uncut.** For coarse mulch; 50 lbs. 95c; 100 lbs. $1.60.

**Vigoro**

At the time of going to press with this catalog no definite word has been received about the availability of Vigoro for your vegetable and flower garden. The manufacturer hopes that the Government will give their approval to a new but equally effective formula which does not draw on essential war materials. Just as soon as Vigoro becomes available again, we shall have it for you.

**Wood Ashes.** Wood Ashes are valued for their potash which is an essential element to all plants, but particularly important to those which require an alkaline soil such as Carnations, Delphinium, and Lilies. 25 lbs. per 1000 square feet. 25 lbs. $1.25; 50 lbs. $2.00; 100 lbs. $3.00; 500 lbs. $13.50.

For other fertilizers, see page 91.

**Keep Your Soil Productive**

Chemical fertilizers are not indispensable when it comes to keeping the soil productive. After all, they are of comparatively recent origin and mankind got along without them for many centuries. That does not mean that they have no value, but under present conditions gardeners will have an opportunity to go back to the old-fashioned manures which, although not as highly-concentrated, have other qualities important to plant growth.

By all means establish a compost heap as a valuable source of humus and plant food. ADCO will help you to produce your own rich, odorless manure from all kinds of garden refuse. Bovung, cow manure, and dried sheep manure may be used freely throughout the garden to increase soil fertility. Work them well into the soil surface or mix into the planting hole. Bone-meal and wood ashes may be mixed with these manures.

Local Delivery—There is no charge for delivery of goods in Philadelphia and immediate suburbs.

Canadian Shipments
Flower Seeds and Bulbs are sent "Prepaid." S. funds.

Foreign Shipments
